

Wabi-Sabi™

Elvin Kee

Wabi-Sabi™ is a Japanese philosophy often described as appreciating the beauty in imperfection. The sculpture aims to combine the traditional Japanese thinking with emerging technologies such as parametric modelling, and digital fabrication. Plywood that is 2mm thick is a material that is commonly used in construction sites. They are usually discarded after one use. Wabi-Sabi™ attempts to look at discarded construction material in a new way, where the imperfections are embraced as parametric art.

Technical Specifications

Structure	2mm Plywood, Dowels, Threaded Rod
Material	Plywood, Steel
Finishing	Paint, Melamine, PP, Veneer, etc.
Standard Thickness	2mm
Mounting Mechanism	M6 Threaded Rod
Hole Diameter	1, 2, 3, 4, 5, 6, 8, 10, 12mm, etc.
Standard Pattern	Oriental
Edge	Unfinished
Eco-Friendly Test	EN 13986 : E1
Fire-Rated Test	EN 13501-1 : Class B, s1 d0
Acoustics Test	Refer to Specifications
